

Industrial Electrical

Exact measurements can sometimes make the difference between operational catastrophe or success. Error or compromise is not an option, which is why electrical utilities depend on Canadian Instrumentation Services Ltd. (CISG) to help them measure with confidence.

CISG has the unique ability to perform traceable calibrations of your power and high voltage measuring and test equipment. Each year CISG handles thousands of calibrations for electrical utilities.

CISG offers a unique **Asset Management Program**. We provide our customers with a certificate of calibration and easy to understand results. Each item is tagged with a calibration sticker detailing the calibration status. All measurement and test equipment calibration records are permanently maintained.

With measurement capabilities to 100,000 volts, AC or DC, CISG calibrates and repairs all types of high voltage instruments from manufacturers such as Associated Research, Criterion Hipotronics, Multiamp, Quadtech, Rod-L, Slaughter and Yokogawa.

CISG provides customized calibration for power-related instruments from manufacturers such as Fluke, HP/Agilent, Manta, Megger (Avo/Multiamp/Biddle), Phenix, Rotek, Valhalla, Voltech and Xitron.

Let the expert technicians at CISG tailor a calibration program that will help minimize your risk and conform to your industry's ISO or Military standards.
