

Torque

Is maintaining your investment of costly instruments a priority?
Are you concerned about product and workplace safety?
Canadian Instrumentation Services Group Ltd. (CISG) maintains a torque calibration system that provides calibration services for a variety of torque measurement and test equipment.

CISG offers technical assistance and calibration of torque measuring and test equipment including torque screwdrivers, torque meters and torque wrenches.

Our expert technicians and advanced technology provide customized calibration support for your torque measurement and testing applications ranging from 4 in-lbs to 1000 ft-lbs to +/- 0.25%. Our torque calibration services comply with the ASME B107.14M-1994 standards.

Let CISG tailor a calibration program that will help minimize your risk and conform to your industry's ISO or Military standards.

CISG offers a unique **Asset Management Program.**

We provide our customers with a certificate of calibration and easy to understand results. Each item is tagged with a calibration sticker detailing the calibration status. All measurement and test equipment calibration records are permanently maintained.
